

The AI-Native Engineering Environment

A project opened in AURA gets a persistent, structural understanding of itself — a real knowledge graph built from static analysis, not a best-effort text search — before any model is ever called. Engineering work runs as first-class, resumable processes. The AI itself is never locked to one vendor: bring your own key to any of 11 providers, and every feature works identically.

MAJOR COMPONENTS

TECHNOLOGY STACK		STATUS	
Frontend	React 18.3 · TypeScript 5.4 · Vite 5.3 · Tailwind · Monaco	Open source — Apache 2.0, public repository	
Backend	Node.js ≥18.18 · flat http.createServer · SSE	CI — typecheck + build gated on every push	
Native shell	Tauri v2 (Rust 1.77+)	Stage — early, single-maintainer, active development	
Storage	Local filesystem · AES-256-GCM credential store	No built-in model — BYOAK only, by design	
Monorepo	npm workspaces · TS project references
